Business Disruption with Downtime Risk

Despite your best efforts, we know it is not possible to fully predict or protect against **disaster** or downtime. That is why it is crucial to **be prepared** to recover your data, should the worst happen.

CHALLENGES

IT failure

natural disaster

electricity failure

cyber attacks

Optimum Solution

Deploy a **Business-Continuity-as-a-Service** Solution to **protect** your mission critical infrastructure.

Ensure successful non-disruptive operations in the event of a disaster.

Minimize risks and **comply** with regulations.

Business-Continuity-as-a-Service

Optimum Solution

Plan, Design and Deploy

Plan, design and deploy custom and tailored made IT Infrastructure Business Continuity.

Low RTO/ RPO and Failback

- Reliable disaster recovery location to guarantee business continuity.

- Low RTO/ RPO to ensure uptime in the event of downtime or planned maintenance.

- Failback to your primary datacenter when up and running again.

- Optional quarterly failover tests to Azure or at **cl8**.

Microsoft Azure Cloud Services

Utilize Azure Site Recovery (ASR) and backup to replicate your Virtual Machines (VMs) directly on Azure.

cl8 Business-Continuity-as-a-Service + Microsoft Azure Site Recovery (ASR)

We are experiencing the fourth industrial **revolution**, in which the digital transition that is taking place is changing everything in the way businesses **work**. The evolution over the years transformed IT to become a tool that will determine the **success** or survival of your **business**.

- **Minimize Complexity & Cost**

- **Safeguard your Business**

- **Test your Business Continuity on a Regular Basis**

Service includes

1 Planning & architecture workshop

- Define the customer's business RTO and RPO requirements

- Capacity planning using ASR tools to assess current environment

- Define Azure, cl8 and customer on-prem infrastructure requirements

- Estimated total DR cost to Azure: compute, storage, network, and Azure Site Recovery license cost, as well as **cl8** hosting cost if required

- Estimate deployment services cost

2 Solution architecture & environment readiness verification.

- Eligibility assessment

- Best practice

3 Solution deployment in a POC environment

- Protection of customer Infrastructure

- Azure services cost will be estimated at planning phase, not included in deployment services costs
